

Digital Technology Adoption in Remote and Northern Indigenous Communities in Canada

Brian Beaton

Doctoral Candidate, Faculty of Education
University of New Brunswick

October 13, 2016

**Canadian Rural Revitalization Foundation /
Rural Policy Learning Commons Conference
Guelph, Ontario**

Recognizing and honouring the unceded traditional territories of the Wolastoq Nation as the place for my doctoral studies work and the Nishnawbe Aski Nation in northern Ontario where our research work is taking place and Six Nation territory where we gather.

As a settler and ally, I am privileged and honoured to be working with the First Nations Innovation research project, the Keewaytinook Okimakanak First Nations and their First Nations council

Report: Digital Technology Adoption in Northern and Remote Indigenous Communities in Canada

Posted on *April 26, 2016* by *brianbeaton*

This report prepared by the FMCC team addresses research on digital technology adoption in remote and northern First Nation and Inuit communities. It summarizes the major elements of our project, including the literature review, identification of primary and secondary data sources, methodologies, strategies and research questions, and recommendations from our research. It includes six comprehensive appendices that are linked to the appropriate report sections and are available online.

Suggested Reference to the report:

RECENT COMMENTS

First Nations Innovation research

- Ongoing since 2005
- Funded by SSHRC (Social Sciences & Humanities Research Council of Canada)
- In-kind from partners:
 - ✧ Keewaytinook Okimakanak (Ontario)
 - ✧ First Nations Education Council (Quebec)
 - ✧ Mi'kmaw Kina'matnewey (Atlantic)

New model for understanding technology adoption

- Previous model - individual / household adoption – works well in urban environments benefitting telcos but difficult to apply in remote / northern Indigenous communities
- **A new model is required**
 - Judy Whiteduck (2010) e-Community model for digital technology deployment in First Nations
 - McMahon et al. (2014) Indigenous intermediary technology organizations
 - Rhinesmith (2016) networked community adoption model and Dailey, Bryne, Powell, Karaganis & Chung (2010): central role of community organizations in technology adoption in low income communities in US
 - O'Donnell (2001): role of community and voluntary orgs supporting technology adoption in Europe

Whole community understanding of digital technology adoption

Digital technologies used by and for the whole community

Healthcare,

Indigenous
resurgence, self-
determination and
activism

Land-based
activities and
environmental
sustainability

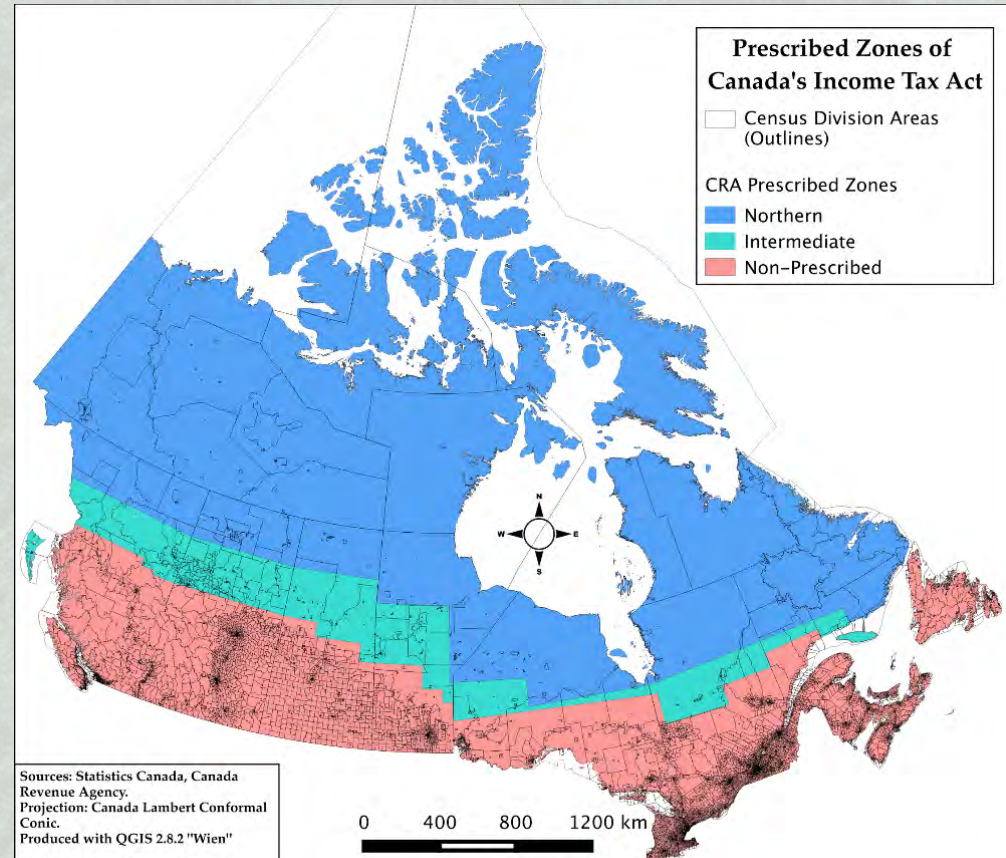

How Indigenous communities use digital technologies: research

- Indigenous resurgence
- Indigenous culture and identity
- Indigenous government and governance
- Education and distance education
- Healthcare, telehealth, and health education
- Economic development and entrepreneurship
- Land-based activities
- Public safety
- **Social networking**

Identification of Primary and Secondary Data Sources

Data sources associated with:

- community members / household factors
- community-level factors
- infrastructure supporting adoption

Methodologies, Research Strategies and Research Questions

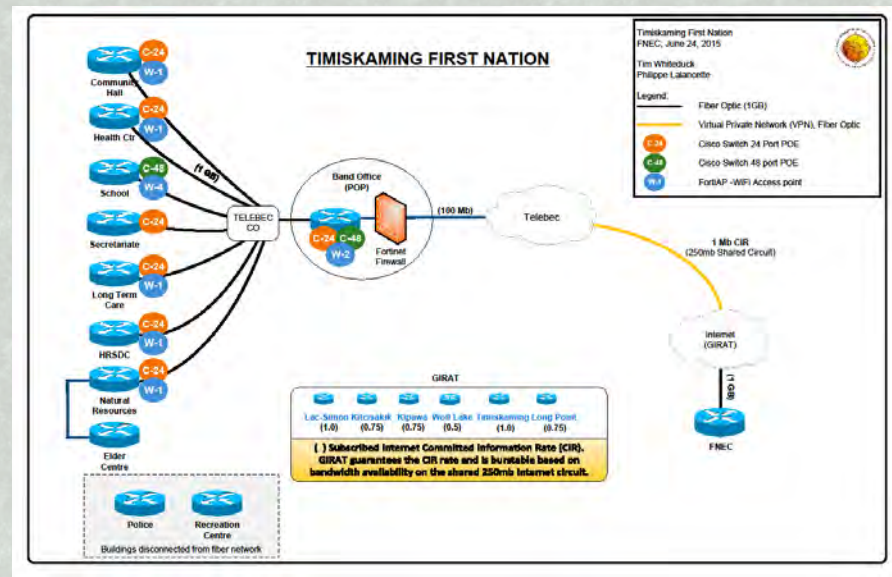

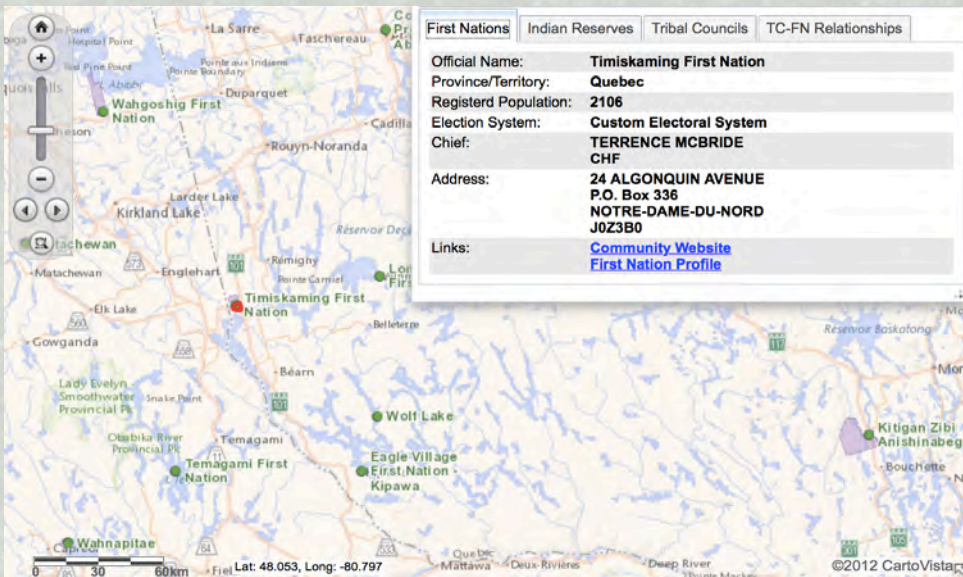

1. Methodologies considered

- Focus group with video conference
- Online survey of community members
- Online leadership survey
- Questionnaire administered in schools

2. Other methodologies to consider for future studies

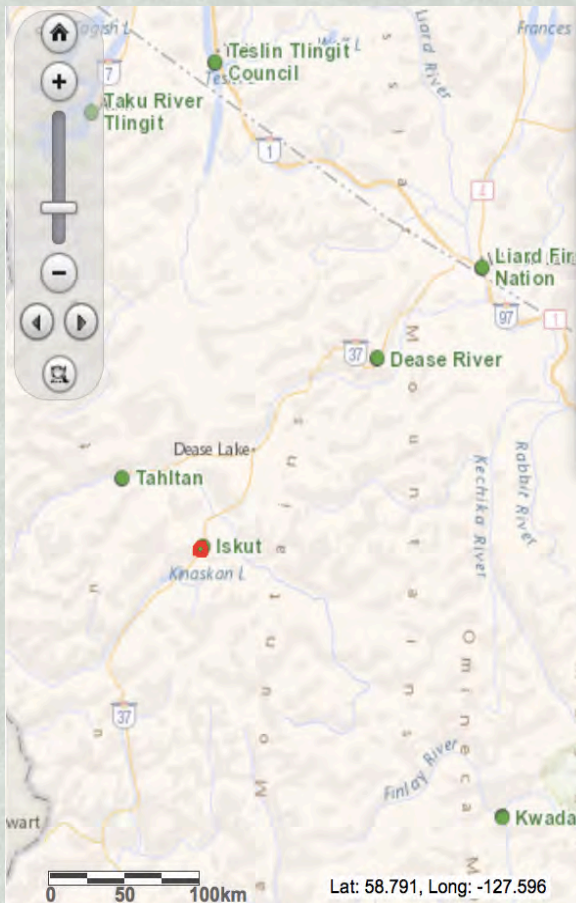

- Random sample telephone survey
- Targeted telephone survey
- On-site household survey
- Research questions

Identified Recommendations

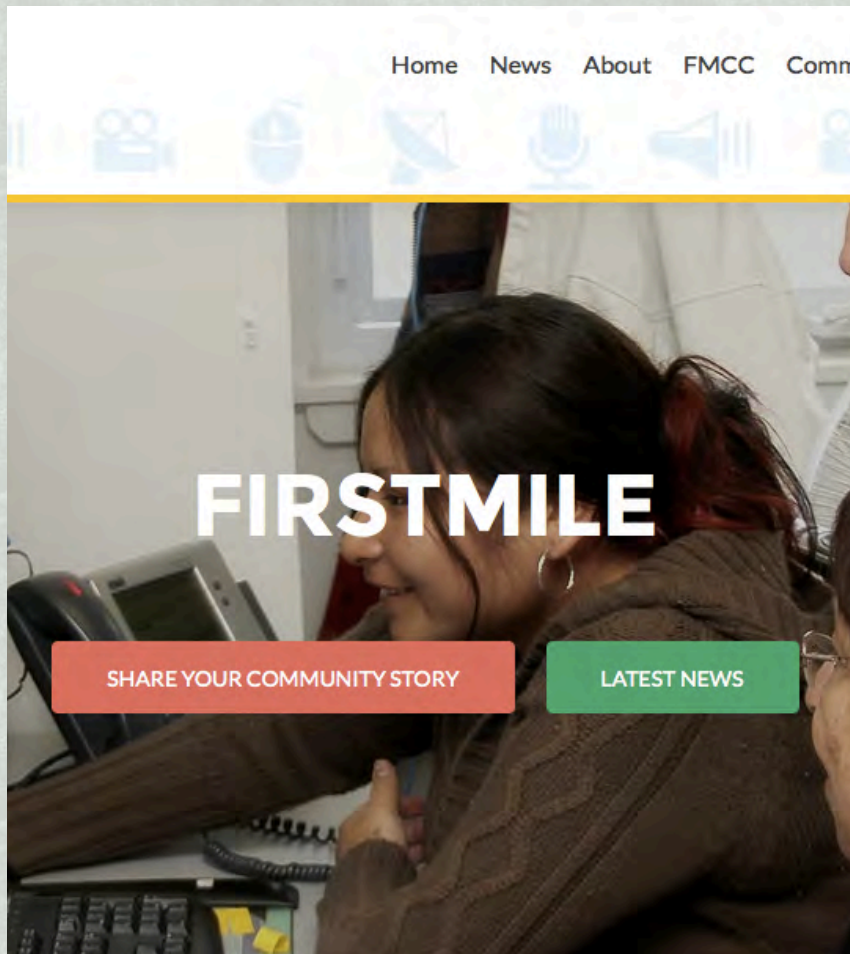

Conducting research on digital technology adoption in remote and northern Indigenous communities:

- More research is needed ..
- Distinguish among Inuit, First Nation, and Métis nations and communities
- Need to work with an Inuit community to include their experience
- Respect and follow the appropriate research ethics and data governance protocols
- Partner with regional Indigenous organizations that can act as intermediaries
- Develop a strong working relationship with each unique Indigenous community
- Online research can be appropriate and cost-effective ..
- Requires an appropriate mix of three methodological approaches: online or virtual research conducted remotely by trained researchers, in-person research with visiting researchers, and capacity-building to train and support local community researchers
- Whole community approach to developing appropriate research instruments and data analysis.

Addressing constraints and barriers to digital technology adoption in these communities:

- Review existing mechanisms for funding digital network infrastructure development in remote and northern regions and assess the resulting costs and benefits to Indigenous communities.
- Support approaches for developing digital infrastructure in northern and remote regions that ensure equity, adaptability, accessibility, affordability and sustainability.
- Support the regional community intermediary organizations that provide technical expertise with the resources required to upgrade, operate and maintain the digital infrastructure in remote and northern Indigenous communities.
- Ensure every Indigenous community has local technical support available.
- Recognize the need for training, skills development and capacity-building in the community, at all levels from residents interested in skills and applications for use at home and work to community technicians.
- Support local and regional efforts to produce digital content in Indigenous languages.
